

JAYANTH SRIHAAS KARANAM

Los Angeles, CA | (562) 837-7759 | jayanth.srihaas8@gmail.com | [linkedin.com/in/jayanth-srihaas](https://www.linkedin.com/in/jayanth-srihaas) | [jayanth-srihaas111.github.io](https://github.com/jayanth-srihaas111)

PROFESSIONAL SUMMARY

Software Engineer with 5 years of experience building scalable full-stack applications, designing automated test frameworks, and shipping AI-powered features across cloud-native environments. Proficient in React.js, Java/Spring Boot, Python, Node.js, and TypeScript with hands-on expertise in CI/CD, microservices, LLM integration, and agentic AI workflows. Proven ability to partner cross-functionally with product and infrastructure teams to accelerate release velocity, close quality gaps, and deliver high-impact user-facing products.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL
Front-End: React.js, Next.js, Angular, HTML5/CSS3, Bootstrap, Tailwind CSS
Back-End & APIs: Node.js, Spring Boot, FastAPI, Flask, Django, GraphQL, RESTful APIs, Kafka
Testing & Automation: Cypress, Selenium, JUnit, Postman, LoadRunner, Unit Testing, E2E Testing, Load Testing
Databases: PostgreSQL, MySQL, MongoDB, MS SQL, Oracle, Redis
Cloud & DevOps: AWS (Lambda, EC2, S3), GCP (App Engine, Cloud Storage), Azure, Docker, Kubernetes, Jenkins, CI/CD
AI: LLM APIs, LangChain, Claude Code, RAG Pipelines, Vector Databases, Generative AI, AI Agents

PROFESSIONAL EXPERIENCE

Lif3away	Los Angeles, CA
<i>Software Engineer</i>	<i>Sep 2024 – Present</i>
- Architected Python/FastAPI microservices powering AI-driven rental workflows across 3 city deployments, reducing property matching latency by 40% and increasing booking conversion rates. - Integrated LLM-based semantic search APIs with vector embeddings, improving property discovery relevance by 30% and enabling natural-language search adopted across all city portals. - Designed and implemented an automated test framework covering functional, integration, and contract test types for AI rental workflows, catching 85% of regressions before staging and eliminating 2 production-blocking defects per sprint. - Enhanced Java/Spring Boot and Node.js services for listing, pricing, and verification, achieving sub-200ms response times under peak traffic. - Improved Kafka-backed event pipelines and deployed on GCP, implementing OAuth2/JWT and Stripe APIs for secure payment workflows processing \$500K+ in monthly transactions.	
Capital One	Texas, USA
<i>Software Developer</i>	<i>Mar 2024 – Aug 2024</i>
- Developed and deployed a scalable CRM application using React.js, Next.js, and Node.js with server-side rendering, driving a 20% increase in user engagement across 3 internal business units. - Owned test strategy and release readiness decisions; built automated test frameworks covering unit, functional, integration, behavioral, and E2E test types using Cypress and Selenium, achieving a 95% bug detection rate before production.	

- Conducted load and performance testing using LoadRunner, identifying bottlenecks that reduced API response time by 35% under peak traffic, enabling stable performance for 10K+ concurrent users.
- Implemented CI/CD pipelines via Jenkins, reducing build and release cycle time by 30%; independently tracked sprint goals and escalated quality risks to stakeholders.
- Optimized PostgreSQL/MS SQL with advanced indexing strategies, cutting query execution time by 40%; scaled services via microservices on AWS and Kubernetes.

Cognizant	Bengaluru, India
Software Engineer	May 2020 – Jul 2022
• Developed and maintained enterprise insurance applications in an Agile/Scrum environment, delivering feature updates across sprint cycles with backlog grooming and cross-team coordination. • Architected automated regression and component test suites using Cypress and Selenium, reducing manual QA effort by 90% and improving defect detection rates across 4 product modules. • Designed security and behavioral test scenarios for enterprise APIs, validating authentication flows, authorization rules, and edge-case error handling to ensure compliance standards. • Built REST APIs in Java and Python; implemented Kafka and Redis data synchronization pipelines, reducing API latency by 25% and improving cross-service data consistency. • Containerized services with Docker and deployed to Azure Kubernetes Service (AKS), reducing rollout downtime by 30% and enabling zero-downtime deployments adopted as the team standard.	

EDUCATION

M.S. Computer Science — California State University, Dominguez Hills	Aug 2022 – May 2024
Application Developer (Part-Time) — Built student-facing web apps with React.js/Vite serving 5,000+ users; designed UI/UX prototypes in Figma increasing engagement by 55%.	

CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900) Microsoft Azure Administrator Associate (AZ-104) Full Stack Web Development (Edureka) Generative AI (DeepLearning.AI) Claude Code Certification (Anthropic) AI Engineer Core Track: LLM Engineering, RAG, QLoRA, Agents (Udemy)
